

JaniVisit

Administer visitors conveniently and securely

Manage visitors in a convenient and secure way – with JaniVisit

Whether you're hosting consultants, third-part contractors or project employees – your company or institution will need to provide temporary access to specific areas. The JaniVisit module from Drakos keeps your visitor management running smoothly by reducing the load on your reception or checkpoint personnel while also provided the highest-possible security for your business.

Discover the possibilities

Using *JaniVisit*, you can create new visitor accounts in just a few clicks, then assign access rights to the necessary spaces at the necessary times and then print out an ID immediately. To simplify registration, information about a visit can be entered in advance. When the guest arrives, the employees at reception then need only select the appropriate entry, note the time of arrival and hand out the ID. But even if the visitor has not been pre-registered, the registration can be done by the reception in a few steps. When the visitor pre-registers, they automatically receive an e-mail notification containing all the important information about their visit. *JaniVisit* notifies the visitor when the person arrives.

JaniVisit also offers the option of recording additional information such as vehicle licence plates and legitimation/ security documentation. Beyond this, persons who are barred from access under any circumstances can also be flagged in the system. Because *JaniVisit* is a module of *JaniWeb*, it links directly to your access management system, meaning you have control at all times of who can access what and when, even for visitors.

In addition, the access rights of your own employees can be precisely defined. Decide for yourself who is to enter pre-registrations, receive visitors and print ID cards, and who is to issue access authorisations for which areas in the company.

Keep visitors in view at all times

JaniVisit provides an clear overview of which visitors are currently on premises or are expected. And if you need greater details: The extensive analysis function in *JaniVisit* lets you see a detailed list at any time of all past visits, including the option to export to the PDF, CSV (Excel) or XML formats.

Your advantages with JaniVisit

- Quick and simple logging and administration of visitors using any modern web browser
- Secure assignment of access rights through direct connection to access management
- Differentiation between one-off visitors (visitor pass only) and recurrent visitors such as third-party vendors (functional ID)
- Pre-registration of visitors simplifies the registration process
- Direct creation and output of visitor IDs and visitor passes
- Overview of upcoming, current and past visits
- Convenient administration of third-party vendors
- Filtering by location (only visits to own location are shown)

Can be expanded using *JaniWeb* modules such as *JaniAccess* (access control) and *JaniAlarm* (alarm management)
